Industry leading guarantees

Freefoam has made a life-long company commitment to make and guarantee long life products through refining technical and manufacturing resources and the cumulative experience of product performance over many years.

50 Year Lifetime Extended Guarantee

Freefoam offers an extended 50 year Lifetime transferable guarantee on all white profiles in addition to the standard 20 year guarantee. The extended guarantee is available on roofline, cladding and rainwater installation projects, where only the Freefoam brand is used and fitted, and registered online by a Freefoam Registered Installer.

20 Year Standard Guarantee

All white Freefoam products are automatically covered by its standard 20 year guarantee. Products are guaranteed not to warp, crack, discolour or blister and provide resistance to air pollution. This level of protection can simply be extended to the industry leading Lifetime Guarantee.

COLORMAX technology

10 Year Guarantee

Colour

The Freefoam colour range of fascia, soffit, cladding and rainwater products is eligible for a 10 Year Guarantee unique in the roofline industry. Backed by Freefoam's own innovative Colormax®.

Woodgrain

The Freefoam woodgrain range of fascia, soffit and cladding is eligible for a 10 Year Guarantee. Manufactured with market leading Renolit EXOFOL MX foil with Solar Shield technology (SST) which offers built-in sun reflection that reduces heat absorption, thus minimising profile temperature and expansion.

Fully transferable

The Freefoam guarantee doesn't end when a property changes hands. It can be transferred to the new owners and subsequent owners so they can continue to enjoy the same peace of mind. Some guarantees only cover domestic properties, but the Freefoam guarantee can also be used by landlords and specifiers from Local Authorities, Housing Associations and commercial projects.

Cladding

A range of exterior cladding products to provide not only a decorative but also a protective facing to any new build or renovation project.

- Standard Open V and Shiplap styles in white and woodgrain finishes
- Fortex® embossed cladding in Double Shiplap, Weatherboard and Shadow Gap Styles.
- X-Wood 16mm woodgrain heavy duty cladding.

Durable

- Standard white cladding products are eligible for a standard 20 year guarantee that can be extended to an impressive 50 year guarantee* when registered online.
- Woodgrain, Fortex embossed and X-Wood cladding comes with a 10 year guarantee.

Light and easy to install

PVC-U cladding panels are designed to make storing, handling and fitting quick and easy. With the weatherboard cladding weighing just 3.15kg per 5 metre board it is 4 times lighter than comparable fibre cement board.

A+ rated

PVC cladding offers a sustainable solution. Fortex comes with significant environmental credentials with the Building Research Establishment's (BRE) 'Green Guide To Specification, giving PVC cladding an A+ rating when installed with standard components.

PVC Internal Panelling

A clean and modern design option, the Geo-panel® panelling system can be fitted to any interior wall to quickly and easily refurbish and restyle bathrooms, kitchens, utility rooms – and even home offices!

The Geo-panel® range includes a wide variety of colours and textures, from classic marble and traditional white gloss tiles through to contemporary quartz and matt concretes. For a perfect finish, choose from our ceiling panels and our collection of high-quality PVC and aluminium trims.

Easy to fit

- Panels fit together with a waterproof tongue-and-groove joint
- No drying time and grouting
- Fix over existing surfaces, including tiles
- No specialist training required
- Range of PVC and Aluminium trims

Installation Guide

Preparation
Plan all roofline installation procedures, system components and installation sequence before onsite fitting begins.

Ensure all work is carried out in accordance with good construction practice and complies with relevant Building Regulations.

Access
Never attempt to access the work area with an unsupported ladder or without a stable deck.

Always use a full scaffold platform or a purpose built cantilevered deck system with guard rails.

Storage and Handling
Load and unload by hand and support both ends of a 5m length when handling. Stack no higher than 1m, in pack sleeve on a flat base. Avoid contact with solvents, paint, creosote, bitumen etc. Coloured products should not be stored in direct sunlight, as heat distortion may occur.

Cutting
Use conventional carpentry tools. Run power tools at speeds appropriate for timber. Nail and screw holes do not require pre-drilling.

Asbestos
By law all asbestos materials must be removed by trained operatives under strictly controlled conditions. If you suspect asbestos is present consult your Local Authority before proceeding.

Working Temperatures
Avoid installation in temperatures greater than 30°c or less than 0°C.

Fixing Guidelines

Fixing	Board	Max Centres
N50	Capping Over: FW & FO	White 600mm Black 300mm Woodgrain and other colours 400mm
N65	Full Replacement: FMS, FMXS, FMO, FMD, FMR, FMF, FMXD	
P40	Soffit	
P30	Soffit	
CP30	Hollow Soffit	

Spacing of Fixings: Horizontal

White Fascia	600mm
Coloured Fascia	400mm
Black Fascia	300mm

Spacing of Fixings: Vertical

Fascia Up to 250mm wide	2 fixings at required horizontal centres
Fascia Wider than 250mm	3 fixings at required horizontal centres
Distance between fixings when there are 2	not less than half width of board
Distance between fixings when there are 3	not less that quarter width of board

New Build/Full Replacement

Freefoam manufacture a range of Magnum boards for use in full replacement or new build work which require no backing board. The boards are self-supporting and should be fixed with Plastops colour co- ordinated nails.

Freefoam Rainwater system can be fitted directly to Magnum boards without the need for timber support.

If fascia used is less than 15mm then 12mm WBP plywood backing boards should be used.

Please note:
Distance from edge of board = not less than thickness of board, or 15mm, whichever is greater*

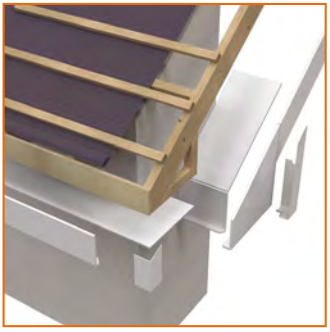

*pre-drill fascia in low temperatures & predrill accessories in all temperatures

Capping Over

Freefoam manufacture 10mm Square Leg and Ogee Fascia designed for capping over existing fascia and bargeboard that are in sound condition, or for use with a backing board in refurbishment work.

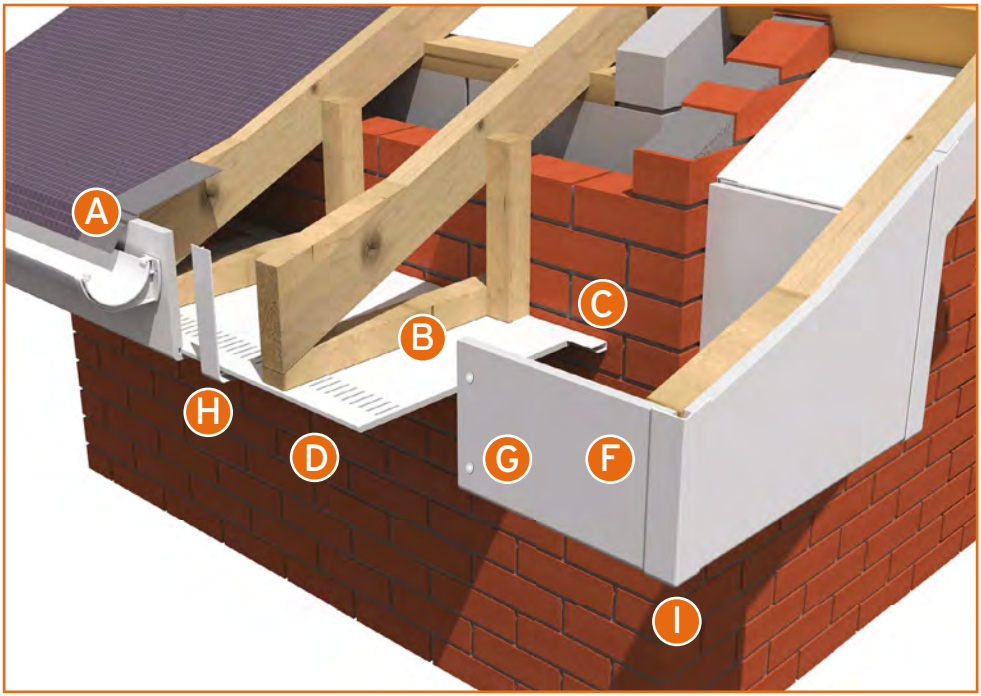

Available in a wide choice of colours with complete range of matching trims and accessories for a neat finish.

FO Ogee Fascia (10mm)
FW Plain Fascia (10mm)

Standard over fascia installation

Roofline Installation

Ventilation

Freefoam supply a range of roofline ventilation products. Ask your stockist for details. Adequate ventilation of the roof space through eaves, in terms of minimum statutory air path dimensions for various roof configurations in new build constructions, is a specified requirement.

Set out in British Building Regulations 2010: Approved Document F (England & Wales), as well as in its Scottish, Irish and Northern Ireland equivalents.

Order of work

A Cut back and replace damaged or worn felt, eaves can be made watertight using an eaves protector.

Use string lines to ensure rafter feet are aligned, If necessary use packing to align rafter feet.

B Install soffit bearers using timber battens spanned from rafter feet to the wall. Ensure that they are aligned and level.

Installation of Soffit

C If using a F107 'J' Trim fix this at each soffit bearer before soffit is fixed.

D Fix soffit boards to bearers using appropriate fixing pins (as shown on page 43). Soffit should extend 5mm beyond rafter if magnum fascia is used.

If fixing hollow soffit with joints perpendicular to fascia boards then supporting bearers will need to occur at each joint.

E If necessary boards can be joined at the ends using a F106 H/Joiner. Allow for 6mm extension gap at each end (12mm gap if joining two boards).

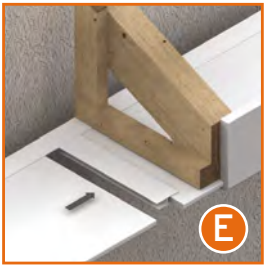

Installation of Fascia

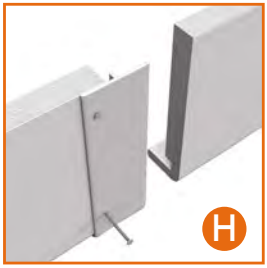

F When determining fascia size ensure height is sufficient to provide tile kick. Allow for over fascia vents if being used.

G Fix Magnum Fascia Board with two N65 Plastops at each rafter end and non Magnum boards (less than 15mm) using two N50 Plastops at each rafter end.

H Join lengths of fascia between rafter positions using appropriate matching joiners ensuring 6mm expansion gap is provided at the end of each board.

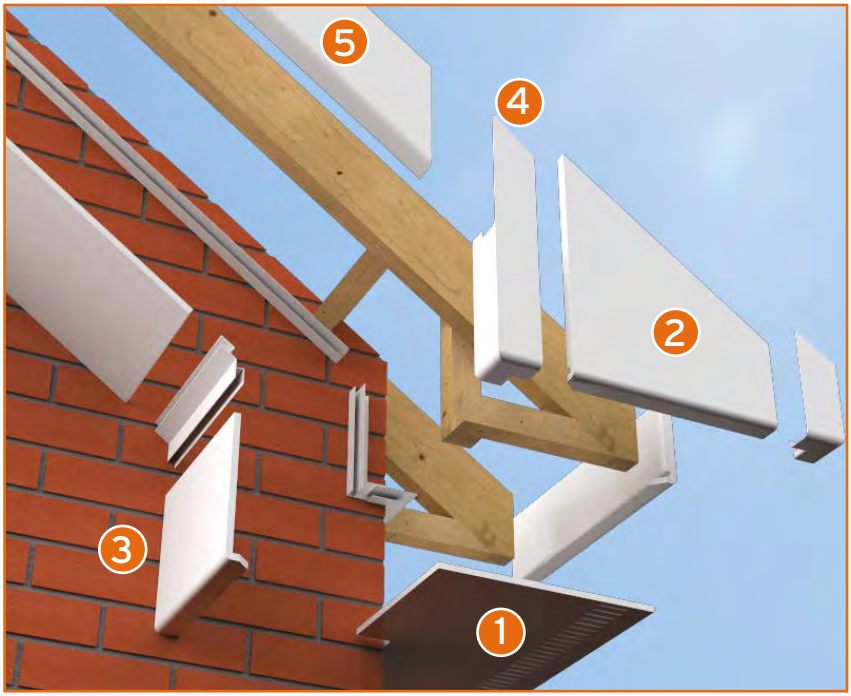

I Use matching corner for internal and external corners. Allow for 6mm extension gap at each end (12mm gap if joining two boards).

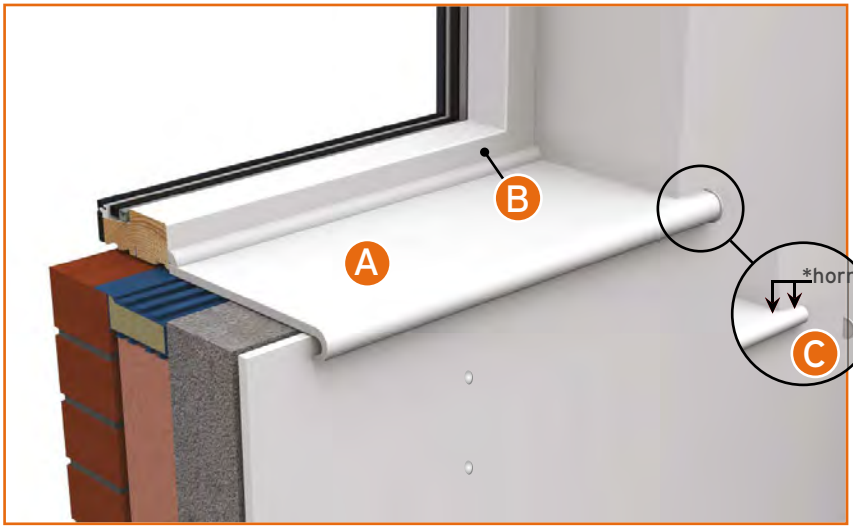

Box End

1. Finish Fascia level with the face of the rafter gable. Soffit should over hang by 10mm and may be cut square or mitred.
2. Measure and cut fascia to form the return to gable wall using appropriate Double Ended Fascia Board, measure and cut box end to suit.
3. Measure and cut fascia to form the return to gable wall.
4. Remove section from corner joint to fit around rafter.
5. Fix fascia as bargeboard directly to gable rafter.

Note: Timber hangers should be installed as required to locate box end structure.

Window Boards and Trims

Preparation

Ensure substrate is clean and dry and is suitably sound to retain the window boards. If rotting or loose timber is present this should be replaced.

Installation

Ensure substrate is level and at the required height to meet the window at the required location. If necessary use packing to level the substrate or to raise the level.

Cut window A board to required depth and length. Note: allow extra length if horns* are required and trim board accordingly.

Fix board to substrate using a suitable general-purpose adhesive.

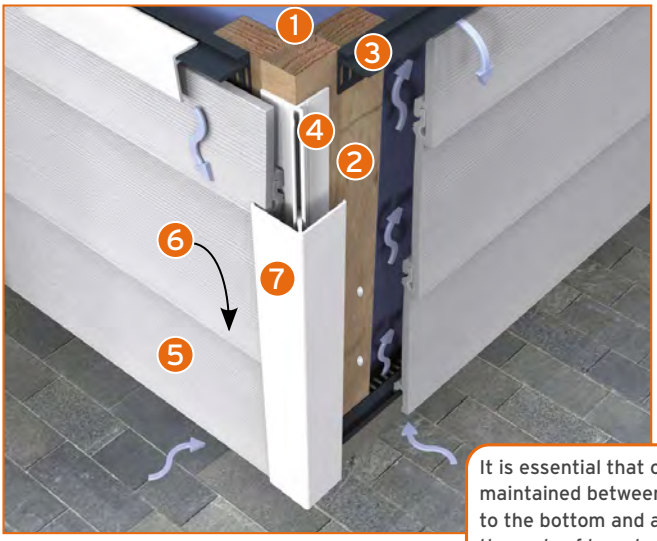

Junction between the board edges and window/reveals should be sealed with low modulus silicone.

If mechanical fixing is necessary use stainless steel screws or nails with plastic heads.

Fix trim B at junction between the cill and the window using low modulus silicone.

Cut endcaps C to length and fix using a suitable general-purpose adhesive.

Cladding Installation

Fitting instructions are suitable for all cladding ranges. Please see pages 22–26 for details of cladding products.

All Freefoam cladding profiles can be fitted horizontally or vertically.

When installing Cladding boards vertically, additional cross battens fitted vertically must be installed to allow for ventilation.

It is essential that continuous ventilation is maintained between the vertical battens from the top to the bottom and adequate expansion is allowed at the ends of boards.

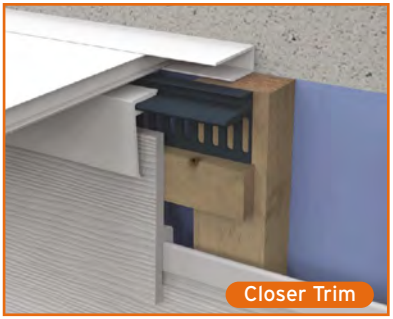

Typical Installation Sequence

1. Fix a suitable breather membrane to substrate in accordance with manufacturer's recommendations.
2. Fix vertical 25mm x 50mm battens to substrate at 400mm c/c. start 200mm from the ground.
3. Fix ventilated starter trim at bottom of area (FC3123) making sure it is level. Fix ventilated closer trim (FC311E3) to top of area.
4. Fix Single Part Trims and/or first part of Two Part Edge, Corner and 'H' Trims as necessary. Do not cut second parts of trim to length yet.
5. Fit first Cladding Plank to Vented Starter Trim and screw fix top to cladding batten using ACSS250 cladding screws. Where necessary join the end of boards using a compatible Butt Joint or 'H' Trim with the correct expansion joint.
6. Interlock next Cladding Plank to the Plank below and screw fix top to cladding batten with ACSS250 cladding screws, repeating the process until the entire area to be clad is covered.
7. Cut second parts of 2 part trims to length and clip in place.

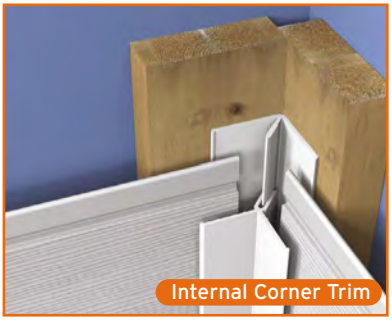

Note: Download Dormer Cheek installation information from www.freefoam.com

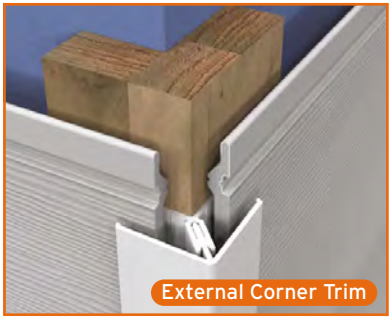

Cladding Trims

Roofline and Cladding Maintenance

When compared to the more traditional timber PVC roofline and cladding is an extremely low maintenance product.

All of our external PVC products come with weather-resistant properties that ensure they are durable enough to withstand harsh weathering and minimise the risk of severe wear and tear.

However, there are a number of steps you can take to help keep them looking as good as new for as long as possible.

Cladding

We would highly recommend rinsing your cladding down with warm soapy water or a pressure washer (adjust to 80bar maximum with the nozzle 50cm minimum distance from cladding surface) every now and then to keep it clean and free from dirt or stains. Use caution around ventilation openings to prevent excessive water ingress.

How to clean PVC if you're not using PVC panel cleaner

Step 1: Create a solution of 1 tablespoon of washing up liquid, and 1 litre of warm water in a clean plastic pail or bucket. Thoroughly mix the solution.

Fascia, Soffit and Gutter

You can use specially formulated PVC panel cleaner, a mild, non-abrasive cleaner designed for PVC. Or you can simply wash down fascia, soffit and gutter occasionally with mild detergent and water. Clean out gutters of leaves, debris and moss. This ensures they maintain optimum performance.

Step 2: Wipe the PVC panels with the solution using a microfibre cloth or sponge. Remove as much loose dirt and grime as possible. Frequently rinse the cloth with fresh water to avoid reapplying dirt to the PVC panel.

Step 3: Rinse the PVC panels with fresh water to wash away any of the soapy residue and/or the loosened dirt and grime.

Step 4: Buff the panels with a clean dry microfibre cloth to add shine and prevent soap scum from being visible.

Coastal areas: In coastal areas more frequent cleaning may be required.

Freefoam, the colour specialist

COLORMAX™ technology

SST

RENOLIT

Freefoam is the colour specialist manufacturing one of the most technologically advanced colour PVC-U and PVC-UE fascia and soffit ranges using the unique patented Colormax™ technology.

Here's the science!

Freefoam manufacture using the co-extrusion process. A strong PVC-UE foam 'core' is simultaneously co-extruded with a rigid PVC-U skin, creating a smooth strong and hard wearing surface.

Colour Guaranteed

Available in a wide range of eight standard colours backed by an industry leading guarantee – up to 50 years on white products* and 10 years on all other colours

Off the shelf

Critically for trade and commercial sectors Colormax™ technology allows Freefoam to supply the majority of colour products straight from stock. With no minimum order quantities Freefoam make choosing colour an easy option..

Woodgrain

Freefoam work with world leading foil provider Renolit using the Exofol PVC film for all woodgrain products to provide a durable fade resistant product.

Manufactured with two layers, the colour pigments in the base film use Solar Shield Technology to protect the fascia, soffit and cladding against excessive heat build up and the upper transparent layer prevents against fading caused by UV radiation or other weathering effects.

This technology allows Freefoam to offer a ten year guarantee on all woodgrain products.

- Built in sun reflection
- Reduced heat absorption
- Reduced profile temperature and expansion
