

THE QUINTESSENTIAL PERIOD SASH WINDOW, UPDATED FOR THE 21ST CENTURY

Heritage Rose

The Heritage Rose

Tradition is the watchword of Heritage Rose

Second only to Ultimate Rose in terms of timber authenticity, Heritage Rose is a classically styled sash window that delivers the convenience and all-round excellence of modern uPVC.

Heritage Rose uses the same slim, putty-line profiles as Ultimate Rose, but with a wider 44mm midrail and welded joints. It also features optional flat run through horns, a deep bottom rail as standard and traditional chamfered astragal bars.

And while Ultimate Rose is indistinguishable from timber even from close up, the period detailing and profiles on Heritage Rose mean that from the pavement no-one will know that it isn't an original timber window.

Heritage Rose has been used in conservation areas across the UK, including the Royal Borough of Kensington and Chelsea, Cambridge, Lincoln, Snowdonia and the Lake District. Like every window in the Rose Collection it offers truly modern performance, keeping your home warm, quiet and secure.

Flat run through horn

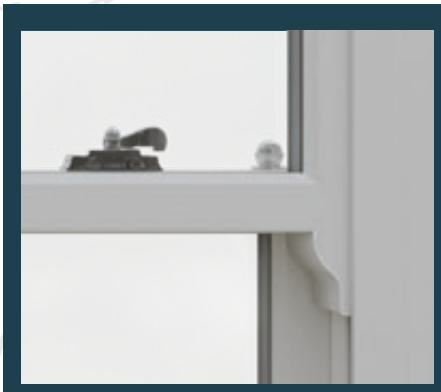

Mitre-welded corners

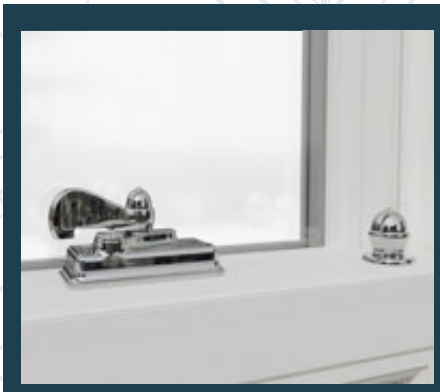

Deep bottom rail

Putty line chamfers

44mm midrail with flat interlock

Acorn furniture

Heritage astragal bars

The Heritage Rose

Benefits

- Maintenance-free – no more painting
- Tilting sashes for simple cleaning

Features

- Welded joints
- Slim 44mm midrail
- Slim putty-line external profiles
- Deep bottom rail
- Aluminium-mounted heritage astragal bars in a range of period designs
- Range of finishes and woodgrains
- Classic acorn furniture

Optional Features

- Optional flat faced run through sash horns
- Optional flush or protruding cills

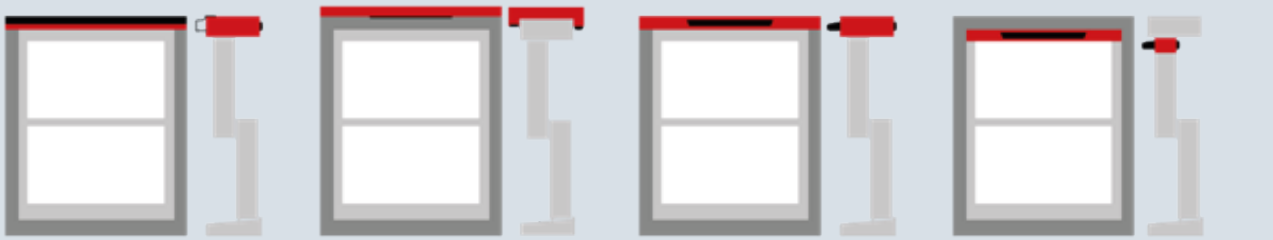

Options

Hardware Options

All available in: Gold, Chrome, Graphite, Bronze, Antique Black, Pewter, White

Vent Options

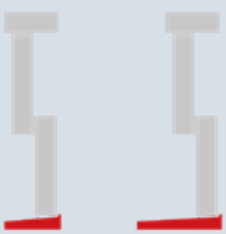

Eclipse | Overhead | Through frame | Through sash (10mm deeper)

Horn Options

Run through horn | Clip-on horn | No horn

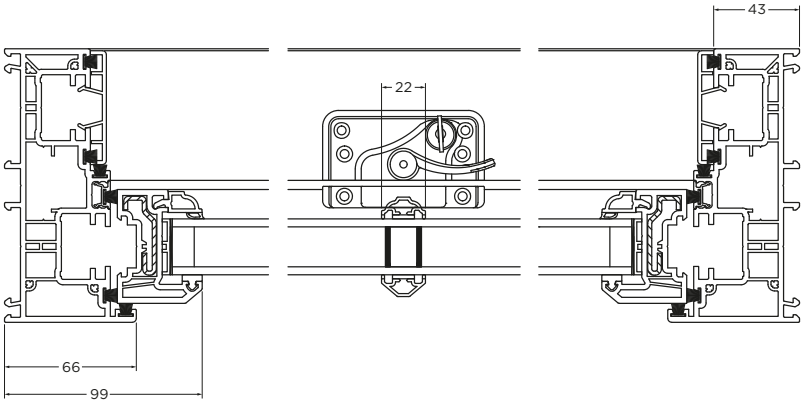

Cill Options

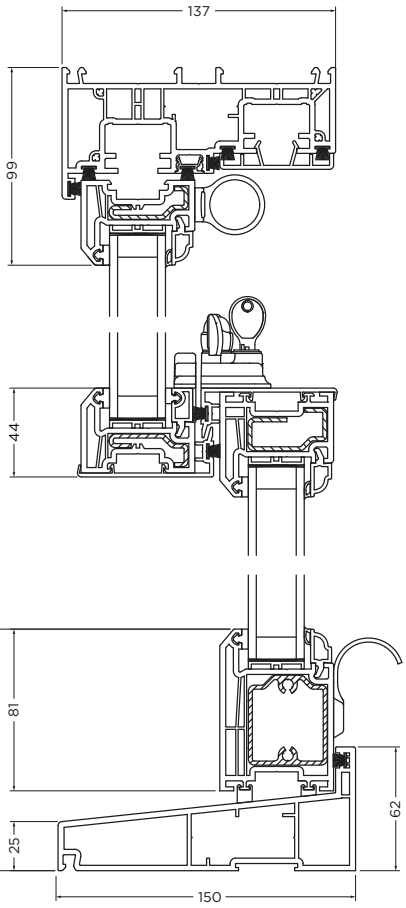

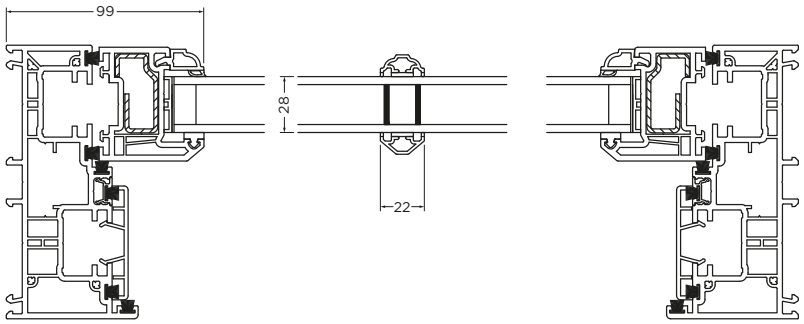

Flush cill | 225 Cill

Comparison of Models

The Rose Collection delivers unbeatable authenticity and exceptional performance. But as a range it's also hugely versatile, offering options that suit a diverse array of properties, budgets and applications.

The Collection consists of three core windows – Ultimate Rose, Heritage Rose and Charisma Rose. While each model has elements that make it unique, all three have some things in common:

- Available with or without sash horns
- 'A'-rated energy efficiency
- Upgradable acoustic protection
- Optional Secured by Design/ PAS24/Part Q security upgrade
- Available with arched or shaped heads
- Can be colour-bonded to any RAL colour on our range of foils
- Available in multi-part combinations and bays

The Ultimate Rose

Profile detail: putty line
Meeting rail: 35mm seamless
Run through horn: seamless
Seahorse horn: option
No Horn: seamless (option)
Corner detail: true mechanical
Deep bottom rail: standard
Deep cill: option
Astragal bars: authentic
Furniture: globe
Removable staff bead: option
Chamber cover: option
Trickle vent option: Eclipse, overhead, frame, sash
Part Q/PAS24/SBD: option
U-value option: 1.5 (standard)
1.4 (glass upgrade)
1.2 (ThermoVFlex)

The Heritage Rose

Profile detail: putty line
Meeting rail: 44mm
Run through horn: flat (option)
Seahorse horn: not available
No horn: option
Corner detail: welded
Deep bottom rail: standard
Deep cill: not available
Astragal bars: heritage
Furniture: acorn
Removable staff bead: not available
Chamber cover: not available
Trickle vent option: Eclipse, overhead, frame, sash
Part Q/PAS24/SBD: option
U-value option: 1.5 (standard)
1.4 (glass upgrade)
1.2 (ThermoVFlex)

The Charisma Rose

Profile detail: sculptured
Meeting rail: 60mm
Run through horn: flat (option)
Seahorse horn: not available
No horn: option
Corner detail: welded
Deep bottom rail: option
Deep cill: not available
Astragal bars: geo
Furniture: acorn
Removable staff bead: not available
Chamber cover: not available
Trickle vent option: overhead, sash
Part Q/PAS24/SBD: option
U-value option: 1.5 (standard)
1.4 (glass upgrade)

Colours & Finishes

Enhance your windows with our range of colours & finishes

Choose from Smooth, Woodgrain or Chalk textured finishes

Standard colours & foils

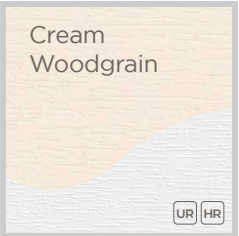

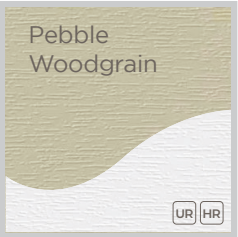

On white woodgrain

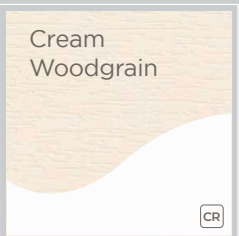

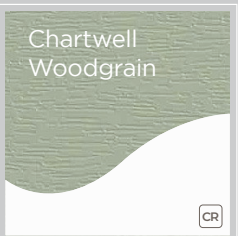

On smooth white

Key: UR - Ultimate Rose HR - Heritage Rose CR - Charisma Rose

Note: Custom RAL colours can only be chosen on woodgrain or chalk finishes.

Do I need trickle vents?

In 2022 significant changes were made to building regulations, including Approved Document F: Ventilation. Previously the rules on providing passive ventilation focused on new buildings. In 2022 that was changed to include existing buildings.

Before the change there was no requirement to add passive ventilation when replacing windows, as long as doing so didn't make the situation worse. In practice this meant that if the windows being replaced had trickle vents, the new ones needed them too.

Since June 2022 the regulations mean that you always have to ensure that there is a certain level of ventilation when replacing windows, even if the old windows had none. The level required is 8,000 mm2 for each habitable room (including kitchens), with 4,000 mm2 in bathrooms.

Effectively this means that all window replacement projects have to include trickle vents unless an alternative approved method is in place (e.g. mechanical ventilation), or the building is exempt. There are two key exemptions: conservation areas and buildings made from permeable building materials (such as lime mortar). For conservation areas, you need approval from the local conservation officer. Exemptions for permeable building materials are granted by the local building control officer.

In short, you should assume that trickle vents will be required unless you have an alternative in place or are using an exemption. We suggest talking to your installer and the relevant authorities to check the situation with them.

Trickle vent options

When trickle vents are required, we have a number of different ways of adding them to your windows.

MORE THAN 30 YEARS OF KNOWLEDGE, EXPERIENCE & DESIGN GOES INTO EVERY SASH WINDOW WE MAKE

Designed for you

Combine more than 30 years of sash window experience with industry-leading design, engineering and attention to detail, and you start to see why Rose Collection windows stand out from the crowd. The same amount of effort goes into every window we make, no matter which model you choose.

But more than that, we pride ourselves in doing everything we can to tailor our windows to your needs. No matter how complex or individual your specific requirements, if it's possible, we'll do it.

From curved and gothic arches to bespoke astragal bar and glass designs, there isn't much we haven't seen before. The features shown on this page are just some of the ways in which we can help make your vision a reality.

Bays, Astragal bars & Arches

When it comes to bays, bars and arches we can create a variety of custom designs to suit your needs. With our help, you can achieve any bay configuration you require - from squared to flared - with a combination of sash windows.

If you're looking looking for a traditional appearance without multiple window panes then astragal bars are the way to complete a truly authentic look. Roseview can create your windows to any specification to suit the style you want to achieve, whether that be Victorian, Edwardian or Georgian.

Although most sash windows are rectangular, arched and shaped heads are more popular than you may think. From gentle curves and fully semi-circular true arches, to pointed gothic arches and straight angled heads, we can manufacture your sash windows to virtually any shape you require.

Built by Roseview

Rose Collection sash windows effortlessly combine high-quality modern performance with detailed vintage aesthetics, using durable, long-lasting, maintenance-free modern materials. Manufacturing windows this way requires a complex mix of traditional craftmanship and cutting-edge modern technology, brought together by years of experience and knowledge.

More often than not, standard uPVC windows are manufactured in large factories filled with more equipment than staff. Windows are made in a matter of hours, with very little human participation. Our Buckinghamshire manufacturing facility couldn't be more different.

Our factories has two distinct zones. The first is where cutting and milling takes place. This is precision work that requires state-of-the-art machinery to ensure accuracy and consistency. This is where you'll find our multi-million pound machining centres and CNC millers. The second is where we assemble, glaze and finish our windows. These are skilled tasks performed by our highly-trained workforce, making this part of the factory more like a large joinery than a typical window factory.

Our skilled, experienced staff do everything by hand, from completing the mechanical butt joints to glazing and applying astragal bars. Instead of taking mere hours, windows spend a week in our factory, from saw to door.

It's this combination of state-of-the-art technology, skilled traditional craftmanship and years of experience that allows us to do what we do—we can't do it any other way.

uPVC in Conservation Areas

Sash windows are quintessentially British; they've been an important part of our architectural heritage since the 17th century. Unfortunately, many original sash windows have already been lost; replaced with inappropriate low-cost casements that aren't sensitive to their surroundings.

In response, more and more parts of the UK are being designated as conservation areas, sometimes with the extra protection of an Article 4 Directive. This helps to preserve the character and appearance of an area, and in doing so protect our architectural heritage.

Rose Collection sash windows have heritage and conservation at the heart of their design. In an area where sash windows are common, the Rose Collection blends in perfectly—a far superior option than the "mock sash" casement windows used so often in the past.

As you move up the model range, you move up in terms of authenticity. At the top you have Ultimate Rose—a window that looks and feels exactly like an original timber sash window, even from close up. In fact they're so authentic, we often receive comments from customers who say that people don't know they've replaced their windows. That's why Rose Collection sash windows have been approved for use on projects in conservation areas across the UK.

You should always check with your local authority to see if your project requires permission. Your local Rose Collection Approved Installer can help guide you through this process.

Refurb and New Build

While Rose Collection sash windows are an obvious choice for refurbishment projects, they're also popular in new builds. And while the windows used for each project type are the same, the requirements of those projects differ widely.

Typically sash windows are used in three scenarios: refurbishments where original sash windows are being replaced, refurbishments where sashes have previously been replaced with something less appropriate, and new buildings built in a classic style.

On refurbishment projects replacement windows have to be authentic, while offering improved performance over the windows they are replacing. Aesthetics are critical; whether it's a period property in a conservation area or simply a traditional home that was built for sash windows. Once the look and feel are right, the low-maintenance energy efficiency, security and acoustic benefits are a welcome bonus.

On new builds priorities are a little different. Certification is key as regulations are much tighter than on replacement windows. Energy efficiency, security, ventilation, safety – these are all areas that need to pass stringent building regulations. Windows still need to look great, but they don't necessarily have to provide a perfect match to windows in older homes. Instead, they need to realise the vision of the architect or self-builder while fully complying with building regulations.

We've designed Rose Collection sash windows to work equally well in both refurbishment and new build projects. They have the classic style, slim sightlines and period detailing demanded by authentic refurbishments, while offering the full spectrum of modern performance benefits – backed up by independently tested certification – that modern building regulations require.

Accreditations

Rose Collection sash windows aren't just about authenticity and style; they also provide all the benefits you'd expect from cutting-edge design and modern materials and manufacturing techniques. So whether you're replacing old windows or building in new ones, you can be confident that your sash windows will offer both the performance and compliance that you need.

Energy Efficiency

All our windows are 'A' rated as standard, with a U-value of 1.5 W/m2K. With different glazing this can be further enhanced where required.

Part Q/PAS 24

All Rose Collection sash windows are optionally available with the enhanced security that provides PAS 24:2016 accreditation and Part Q compliance for new builds.

Secured by Design

Building on our PAS 24:2016 format, all Rose Collection sash windows are available with Secured by Design accreditation.

Acoustic testing

All models in the Rose Collection have been independently tested and audited. This makes them the only uPVC sash windows on the market with dedicated acoustic accreditation.

Weatherproofing

Rose Collection sash windows are independently tested to BS6375 for air and water permeability and wind loading. All models achieve Class 3 for air permeability, up to 8A – the highest you can get – for water tightness, and 1600 Pa (114.3 mph) for wind loading, which is classed as hurricane level.

Sustainability

uPVC is fully recyclable up to ten times, giving it a 350 year lifespan. Moreover, this is closed-loop recycling – new windows made from old.

Glass and Glazing Federation

Roseview are a proud and active member of the GGF. The GGF is recognised by the UK government and plays a key role in researching and defining new regulations (including Building Regulations) relating to windows, doors and glazing.
